

GPS FLEET MANAGEMENT

The MARCUS GPS Fleet Management System from Fleet One® is designed to meet the needs of businesses looking for an easy-to-use, cost effective solution for managing their fleet. There is no software to purchase. Customers simply log onto the password protected website to access real-time information, and to manage their fleet from any web-enabled device.

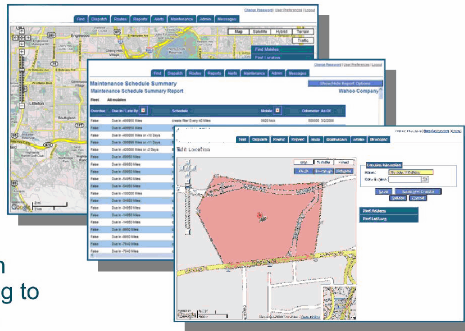

The Fleet One Advantage

Fleet One GPS tracking offers customers the necessary tools to increase overall efficiency in the use of company vehicles, improving driver productivity and customer service.

Features

Mapping

With the mapping feature fleet managers can view the location of a single vehicle or fleets and see their status, enabling managers to locate addresses for upcoming jobs and dispatch the closest driver.

Routing

Routing allows managers to create and save routes, then view and edit driving directions which can be sent directly to the driver.

2-Way Messaging

Managers can stay in contact with drivers through messaging to communicate directions, dispatching to additional jobs, and other necessary instructions.

Vehicle Maintenance

Fleet managers can keep track of fleet maintenance by establishing mileage or time-based maintenance schedules for each vehicle and receive notifications when those are reached.

Administration

Administrators can easily view and modify account parameters including users, drivers, and managers, customizable zones and locations.

Alerts

Managers can receive instant email notifications when violations of user-definable parameters occur enabling them to better monitor fleet activity and maximize productivity. Examples of definable alerts:

- Exceeding speed limits
- First movement of the day
- Departure from location
- Extended Stop/No movement
- Excessive idling
- Unusual hours of operation
- Arrival at destination
- Sensors (idle, cargo door, lift, etc.)
- Entering/Exiting zip code or other set zones

Reports

Customers can access customizable reports tailored to meet the specific needs of their business. The history is archived and can be generated in Excel, PDF, CSV, Text, or HTML formats offering managers all the data they need to make informed decisions for operating their fleet and meeting customers' needs.

- Start Stop
- Speed
- Alerts
- Sensor
- Idle
- Begin/End Day Detailed Activity w/ "breadcrumb map"
- Fleet Summary/Fleet Status
- Locations
- Mileage by State

The MARCUS GPS system features make it a top-of-the-line product. Being the most user-friendly, intuitive, yet affordable GPS tracking system in the industry makes it a must-have for fleet managers operating fleets today.

Fleet One has helped our business in many ways. Keeping track of costs and knowing the location of our trucks is very important.
